

Instashelf Installation Instructions:

Step 1. Place INSTASHELF against the wall with the back facing up toward the ceiling.

Step 2. Using the Level Insert, adjust the shelf so that it is level, as indicated by the small bubble of the insert being positioned in the middle of the two lines.

Step 3. Once the shelf is level, make a small mark on the wall at each Placement Notch.

Step 4. Remove shelf from wall. Make a hole at each mark using the included Hole Punch.

Step 5. To hang shelf, hold shelf with the Top facing the wall and the Back facing the floor. Insert Pre-mounted Hanger into the holes and rotate the shelf downward into place.

Note: If the shelf is not tight against wall, remove shelf and turn hangers clockwise one full turn, then reinstall shelf. This should cause shelf to install tighter to the wall.

If shelf is too tight when first installed, remove shelf and turn hangers counter clockwise one full turn, then reinstall shelf.
